Education

B.E. in Information Science, RV College of Engineering, 2022-2026

Skills

Frontend: JavaScript (ES6+), component-based UI development, responsive design

Backend: Server-side JavaScript, building and consuming web APIs

Database: Document-oriented NoSQL data storage, schema design

Version Control: Distributed source control workflows, branching strategies

Projects

Event Booking Platform

- Built a component-based single page application for browsing and booking campus events
- Implemented server-side logic using Express to handle booking requests and user sessions
- Stored event and booking data in a document-oriented database (Mongo) with flexible schemas
- Set up authentication flows using JWT tokens for secure API access
- Used a distributed version control system throughout, with a feature-branch workflow and pull requests

Recipe Sharing App

- Created a dynamic frontend where users can post and browse recipes, built with a component library
- Wrote backend endpoints following REST principles to handle recipe CRUD operations
- Used Mongo as the underlying data store, indexing frequently queried fields for performance

Extracurricular

- Active contributor to open source projects on GitHub, mostly frontend component libraries
- Participated in two 24-hour hackathons building full stack prototypes end to end

Coursework

- Web Technologies, Database Management Systems, Software Engineering
